

TIG Tack Clamp

Powerful tack clamp with one-hand operation
Possibility of using one plier with different heads
Fast and easy head changing, clamping and alignment

Indispensable for orbital welding

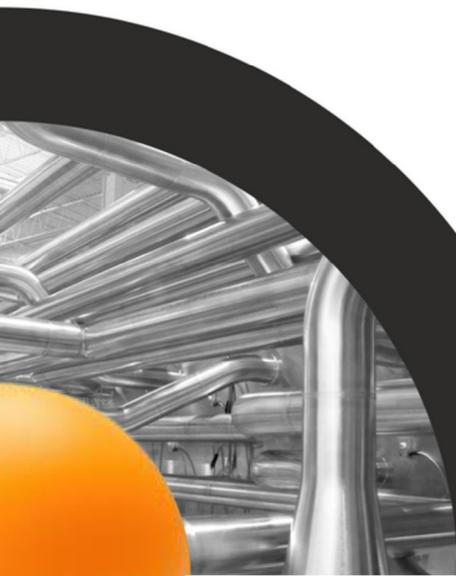

The TIG Tack Clamp makes it considerably easier to tack weld pipe or fitting joints. The unique "grip pliers" can be operated with one hand and has great clamping force. Both pipe ends are firmly gripped without deforming the material and the clamping jaws ensure for correct alignment. Needless to say, the clamping jaws are made of Carbon with aluminium inserts to avoid any contamination on stainless steel tubes.

Wide range of application

For every OD outer diameter, a clamping head in the correct size is available. One plier can be used with several heads. The covered range starts from OD 6mm (0.236") and ends at OD 168.3mm (6.614").

This clamp will help you center tubes to tubes, tubes to tees, tubes to elbows and tubes to flanges.

MADE IN GERMANY
